

The following list of irrigation controllers is provided as a guide and may not be a complete list of all available smart controllers. Add-on devices qualify only if packaged and sold as a combined unit with a preapproved controller as listed below. All controller systems must be installed with the proper weather sensor equipment according to manufacturer specifications.

**Important Product Information**

Model numbers often contain wildcard characters before or after the base model number, such as \*, #, and X, that serve as placeholders for numbers or letters that indicate attributes like color and finish.

**Irrigation Controllers**

The station or zone capacity for irrigation controllers helps users determine the appropriate controller for different sized landscapes (small residential to large commercial). WaterSense lists the maximum station or zone capacity, but customers may need to purchase an expansion module to add stations or zones to the base model.
